THE UNITED STATES OF AMERICA

TO ALL TO WHOM THESE PRESENTS SHALL COME:

DeKalb AgResearch, Inc.

Whereas, THERE HAS BEEN PRESENTED TO THE

Secretary of Agriculture

AN APPLICATION REQUESTING A CERTIFICATE OF PROTECTION FOR AN ALLEGED NOVEL VARIETY OF SEXUALLY REPRODUCED PLANT, THE NAME AND DESCRIPTION OF WHICH ARE CONTAINED IN THE APPLICATION AND EXHIBITS, A COPY OF WHICH IS HEREUNTO ANNEXED AND MADE A PART HEREOF, AND THE VARIOUS REQUIREMENTS OF LAW IN SUCH CASES MADE AND PROVIDED HAVE BEEN COMPLIED WITH, AND THE TITLE THERETO IS, FROM THE RECORDS OF THE PLANT VARIETY PROTECTION OFFICE, IN THE APPLICANT(S) INDICATED IN THE SAID COPY, AND WHEREAS, UPON DUE EXAMINATION MADE, THE SAID APPLICANT(S) IS (ARE) ADJUDGED TO BE ENTITLED TO A CERTIFICATE OF PLANT VARIETY PROTECTION UNDER THE LAW.

NOW, THEREFORE, THIS CERTIFICATE OF PLANT VARIETY PROTECTION IS TO GRANT UNTO THE SAID APPLICANT(S) AND THE SUCCESSORS, HEIRS OR ASSIGNS OF THE SAID APPLICANT(S) FOR THE TERM OF seventeen YEARS FROM THE DATE OF THIS GRANT, SUBJECT TO THE PAYMENT OF THE REQUIRED FEES AND PERIODIC REPLENISHMENT OF VIABLE BASIC SEED OF THE VARIETY IN A PUBLIC REPOSITORY AS PROVIDED BY LAW, THE RIGHT TO EXCLUDE OTHERS FROM SELLING THE VARIETY, OR OFFERING IT FOR SALE, OR REPRODUCING IT, OR IMPORTING IT, OR EXPORTING IT, OR USING IT IN PRODUCING A HYBRID OR DIFFERENT VARIETY THEREFROM, TO THE EXTENT PROVIDED BY THE PLANT VARIETY PROTECTION ACT (84 STAT. 1542, AS AMENDED, 7 U.S.C. 2321 ET SEQ.)

Exhibit A

R36 has the pedigree /T. timopheevi x Itana^{3}/F4. It was first grown in the field and selected as a uniform R-line type in July of 1965 at Billings, Montana by J. A. Wilson, plant breeder for DeKalb AgResearch, Inc. Prior to 1965, the crosses and back crosses were carried out in greenhouses at Lubbock, Texas and Wichita, Kansas from October, 1961 to September, 1964. Since it is an F4 bulk increase and has 3 doses of the recurrent male parent, Itana, it is quite uniform in appearance. Due to the high percentage of Itana germplasm, it is probably more similar to Itana than any other variety.

Field row numbers are recorded in the DeKalb field books during selection and increase are:

Year	Row Number	Location
1965	2695	Billings, Montana
1966	18996	Wichita, Kansas
1967	150028	Wichita, Kansas

The stock was increased at Wichita, Kansas in 1966 and 1967. Shortly thereafter, a number of hybrids were made which established its very high restoring ability.

Exhibit B

R36 is distinguished as follows: plant winter habit, midseason, tall; stem white, strong, hollow; spike awned, oblong to fusiform, middense, erect; glumes pubescent, brown, midlong, midwide; shoulders midwide, oblique; beaks midwide, acuminate, 1.5-4.0 mm long; awns brown, 2-9 cm long; kernels red, midlong, hard, ovate to elliptical; germ small to midsize; crease narrow, middeep; cheeks rounded; brush midsize to large, midlong.

Exhibit D

R36 is novel in its ability to restore male fertility in F_1 hybrids having male-sterile Triticum timopheevi cytoplasm. This was observed over a four year period 1969-72 in an area bounded by Texas, Indiana, North Dakota, Alberta, and Washington. Approximately 90 station - years of replicated yield trial data were involved. The male-sterile counterparts of Ottawa, Triumph, Gaines, Nugaines, Parker, Bison, and Scout plus several other unamed pure-line selections having Triticum timopheevi cytoplasm were used as female parents of the F_1 hybrids during this period. R36 is believed to be a stable 42 chromosome form with no distinguisable variation of type or form in field production.

A minimum of 3 genes for restoration in R36 have been postulated on the basis of its effectiveness in F_1 hybrids in northern latitudes. F_2 growouts in a more fertile southern location (Texas), where single restorer genes can be detected, indicated this assumption is correct. Spike and seed samples are enclosed. Also included are photographs of immature and mature stages.

DeKalb R36 probably most closely resembles the variety Itana. It may be readily distinguished from Itana however by its restoration ability and by the presence of pubescent glumes. While it is also similar to Cheyenne and Winalta in general plant type and stature it can be distinguished from them on the basis of the two above characters (restoration and pubescent glumes) plus its brown glume color.

Statement of the Basis of Applicant's Ownership

DEKALB AgResearch, Incorporated is the sole owner of the wheat variety designated R36 in this application. All of the breeders and cereal chemists involved with development of this variety are full-time employees of DEKALB AgResearch, Incorporated, and funds for the research work used in developing the variety were provided by DEKALB AgResearch, Incorporated over a period of years. Formal agreements between personnel involved in developing the variety and DEKALB AgResearch, Incorporated acknowledging ownership have been executed.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and $50.00 fee to U.S. Dept. of Agriculture, Consumer and Marketing Service, Grain Division, Hyattsville, Maryland 20782. Retain one copy for your files. All items on the face of the form are self-explanatory unles noted below.

ITEM

5 Insert the date the applicant determined that he had a new variety.

12a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.

12b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.

12c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.

12d Provide complete data indicative of novelty. Seed and plant specimens may be submitted and seeds submitted may be sterile. Where possible, include photographs of plant comparisons, chemical tests, etc.

12e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.
